

Status LEDs

Place a status LED adjacent to each edge connector. Where several edge connectors are next to each other they can share the same status LED. This design has two LEDs because connectors are at opposite ends of the PCB.

Mounting holes

Mounting holes are electrically connected to the Jacdac bus nets so they can be used as an alternative to the PCB edge connector. Please use the following reference designators and net mapping:

MH1: JD_DATA
MH2 & MH4: GND
MH3: JD_PWR

This design uses PTH mounting holes with finished diameter of 3.1mm, annular copper ring of 4.4mm diameter, resist keepout of 5.0mm & copper/component keepout of 7.0mm. The mounting holes must be on a 10mm pitch.

Mounting holes should have appropriate silkscreen marker on both sides of PCB, and MH1 should have a pin 1 marker in copper on the top side only. There is a notch in the PCB outline adjacent to MH1.

Jacdac connectors

This reference design is a guideline. Please refer to the Jacdac docs online at <https://aka.ms/jacdac> for the definitive and most up-to-date information.

This design uses the 'EC30' board shape.

Silkscreen front should include manufacturer and module name. Silkscreen should also identify the version number and optionally a QR code.
