

GM3 - Fabrication Notes
GM11 - Board Outline

no board edge pips/
rat's teeth/mouse bites
above this line - make
sure board edge is clean

non-plated 0.7mm wide slots x10 ->

no board edge pips/
rat's teeth/mouse bites
below this line - make
sure board edge is clean

non-plated slots x8, 0.7mm holes x10 ->
drill holes first then rout the
slots _into_ the hole as indicated

much of this side of the PCB is edge-plated. the 0.2mm tracks/arcs below indicate where plating is required. in addition, GM10 contains a router path that defines the entire region that is plated. the board outline (GM11) follows a similar path but also defines incursions where plating is not required.

the following two PDF pages
show renders of the top and
bottom of the PCB. note that
edge-plating is not shown.
